PROFESSIONAL SUMMARY

Principal Software Engineer with 8+ years designing and operating high-performance distributed systems and cloud-native SaaS platforms in regulated financial environments. Expert in **Java, Spring Boot, AWS, and Kubernetes** — owned platform infrastructure serving 40,000+ users at 99.9% uptime (Fidelity), event-driven Kafka pipelines supporting \$2B+ daily trade volume (SEI), and high-availability Java APIs at 5M+ monthly customer interactions (American Airlines). Deep experience with infrastructure as code using **Terraform and Helm**, zero-downtime platform migrations, CI/CD automation with Jenkins and SonarQube, and full production ownership in highly regulated environments.

WORK EXPERIENCE

Fidelity Investments
Principal Full Stack Engineer – OpsWorX Platform

Aug 2024 – Present
Westlake, TX

- Architected and led development of **Java Spring Boot backend APIs** powering the OpsWorX interoperability platform, serving 20+ internal and partner engineering teams with **99.9% uptime** in production.
- Owned the OpsWorX Desktop Application — an **Electron + Angular/TypeScript** full-stack platform and **TypeScript SDK** consumed by 20+ teams; authored typed API contracts and published integration documentation, cutting onboarding time by **50%**.
- Engineered the **SDK event management framework**, reducing cross-application data propagation latency by **40%** and inter-app communication failures by **60%** across 50+ hosted applications.
- Drove architectural decision-making for **migration of 15+ legacy WPF/Prism applications** to a modern microservices-based hosting platform — delivering zero-downtime cutover and reducing deployment cycle time by **35%**.
- Automated **CI/CD pipelines using Jenkins**, integrated **SonarQube** for code quality enforcement, and managed cloud infrastructure as code using **Terraform**; collaborated with DevOps and QA teams to standardize delivery processes across 5+ business units.
- Mentored 5+ engineers through design reviews; established coding standards adopted platform-wide, accelerating feature delivery velocity by **25%**.

SEI Investments
Sr. Java Developer – Special Assets Platform

Mar 2022 – Aug 2024
Remote

- Developed enterprise-grade **Java Spring Boot** financial applications supporting **\$2B+ in daily trade volume** across complex asset classes — options, capital calls, MBS, contributions, and distributions — in a highly regulated financial services environment.
- Architected a fully **event-driven architecture using Apache Kafka and JMS** to orchestrate end-to-end TBA MBS trade lifecycle, processing **100,000+ events daily** with **exactly-once delivery** and cutting settlement latency by **45%**.
- Designed **Kafka producer/consumer topology** with message-key deduplication, transactional producers, and custom retry mechanisms — achieving **99.95% message delivery reliability**.
- Built and maintained **Oracle database schemas, PL/SQL stored procedures, and Hibernate ORM mappings** supporting trade data persistence, reporting, and audit workflows.
- Developed **Spring Boot RESTful APIs** integrated with event streams for real-time trade status visibility — supporting 8+ consuming services with **sub-100ms response times** under peak load.
- Managed **batch job scheduling and ETL workflows** using Spring Batch; supported incident management and level 3 production support in a high-availability financial environment using Agile/JIRA.

American Airlines
Software Engineer – Inbound IVR Platform

Aug 2018 – Mar 2022
Fort Worth, TX

- Maintained and modernized core **Java RESTful APIs** supporting IVR systems handling **5M+ customer interactions monthly** at 99.9% availability.
- Delivered the IVR Containment Deeplink Project — multi-step workflow automation deflecting **600,000+ calls annually** and saving an estimated **\$3M+ in operational costs**.
- Led platform transition from **Java monolith to microservices on PCF/AWS**, decomposing 12 tightly coupled services — improving deployment frequency by **4x** and reducing production incidents by **30%**.
- Enhanced the Proactive Greeting Service using **multithreading and real-time event processing** — delivering 1M+ personalized responses monthly with **sub-200ms response times**.

EDUCATION

University of Cumberland
MS, Information Technology

December 2022

University of Louisiana at Monroe
BS, Computer Science | BS, Mathematics

April 2018

TECHNICAL SKILLS

Languages: Java, TypeScript, JavaScript, Python, C#, SQL, PL/SQL, Shell Script, Groovy

Cloud & Infrastructure: AWS (EC2, S3, Lambda, SQS, SNS, RDS), Azure, GCP, Docker, Kubernetes, Helm, Terraform, Istio, PCF

Backend & Frameworks: Spring Boot, Spring Cloud, Spring Security, Spring Batch, Hibernate, JPA, Node.js, Express.js, gRPC, REST, GraphQL

Frontend: Angular, TypeScript, Electron, React, HTML5, CSS3

Messaging & Event-Driven: Apache Kafka, Kafka Streams, Apache Camel (enterprise integration patterns), JMS, RabbitMQ, ActiveMQ

Databases: Oracle, PL/SQL, PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch, DynamoDB — Hibernate ORM, stored procedures, transactional SQL

CI/CD & Quality: Jenkins, Azure DevOps, ArgoCD, SonarQube, JUnit, Mockito, Cucumber

Observability & ITSM: Datadog, Dynatrace, Splunk, Prometheus, Grafana, ELK Stack, ServiceNow (incident management)

Delivery: Agile, JIRA, Scrum — production support, level 3 incident management, batch scheduling (Spring Batch, Quartz)
