Anamol Shrestha

Principal Software Engineer @ Fidelity Investments | Java · Kafka · Spring Boot · Angular · AWS · Kubernetes · Distributed Systems | Fintech & Platform Engineering | Open to Staff/Principal/Senior Roles

Dallas-Fort Worth Metroplex

Summary

The best infrastructure is invisible — it just works, at any scale, under any load. That belief has shaped my 8+ years of engineering across Fidelity Investments, SEI Investments, and American Airlines. I specialize in distributed systems and backend platform engineering — designing the foundations that let product teams ship faster, more reliably, and with more confidence. At Fidelity, I work on platform and SDK engineering initiatives that serve teams across the organization. At SEI, I built Kafka-driven trading infrastructure for a high-stakes fintech environment where correctness and throughput aren't optional. At American Airlines, I drove microservices decomposition of a large-scale customer-facing voice platform — making a legacy system resilient enough to serve millions. I work primarily in Java, Spring Boot, Kafka, AWS, Kubernetes, Terraform, and Jenkins, with frontend depth in React and Angular. Beyond the code, I care deeply about developer experience, architectural clarity, and building teams that can operate independently. Open to Staff/Principal/Senior Engineer roles. Let's talk if you're solving hard infrastructure problems.

Experience

Fidelity Investments

Principal Software Engineer

August 2024 - Present (1 year 9 months)

Westlake, Texas

- Engineered a platform SDK layer that unified API standards across the organization, giving engineering teams a reliable foundation to build on
- Designed cloud-native infrastructure on AWS and Kubernetes using Terraform, enabling reliable zero-downtime deployments at scale

- Partnered with engineering teams across the org to define platform standards, resolve architectural bottlenecks, and improve overall developer experience

SEI

Senior Full Stack Software Engineer

March 2022 - August 2024 (2 years 6 months)

- Designed Kafka-based event streaming pipelines processing \$2B+ in daily trade volume, implementing exactly-once delivery semantics to guarantee data integrity across trading workflows
- Reduced settlement latency by 45% through distributed system optimizations and targeted refactoring of high-throughput fintech services built on Java and Spring Boot
- Built and maintained TBA(To-Be-Announced) trading platform features end-to-end, owning both backend microservices and Angular-based front-end interfaces serving portfolio managers and traders

American Airlines

Senior Software Developer

August 2018 - December 2021 (3 years 5 months)

Dallas-Fort Worth Metroplex

- Decomposed a monolithic IVR platform into independently deployable microservices, supporting 5M+ monthly customer interactions with improved fault isolation and scalability
- Built a deeplink system delivering contextual smartlinks via SMS during inbound service calls, covering the full URL surface and achieving ~13% containment rate by deflecting customers to self-service
- Built RESTful APIs and event-driven backend services using Java and Spring Boot, reducing system response times and improving reliability for customer-facing workflows

USAA

Software Engineer

January 2017 - August 2018 (1 year 8 months)

Education

University of Louisiana Monroe

Bachelor of Science - BS, Computer Science
