Fort Worth, TX — Relocating to Bay Area • (940) 735-0096 • anamol.stha@gmail.com • linkedin.com/in/anamol-s-0b9065168

PROFESSIONAL SUMMARY

Platform-focused Senior Software Engineer with 8+ years building foundational infrastructure that lets product teams ship reliably at scale. At Fidelity Investments, designed the SDK and API layer that unified developer experience across 20+ engineering teams in a 40,000-employee org — a force-multiplier platform problem solved with event-driven architecture, observability, and zero-downtime deployment. At SEI Investments, architected Kafka pipelines with exactly-once delivery semantics processing \$2B+ in daily trade volume at 99.95% reliability. Deep expertise in distributed systems, cloud infrastructure (AWS, GCP, Azure), Kubernetes, service mesh (Istio), CI/CD, and observability tooling. Relocating to Bay Area; open to 25% in-office.

WORK EXPERIENCE

Fidelity Investments

Aug 2024 – Present

Principal Software Engineer — OpsWorX Platform

Westlake, TX

- Built the foundational SDK and API layer powering Fidelity's OpsWorX interoperability platform — the developer-facing primitive that unified integration standards across 20+ engineering teams and 40,000+ employees, achieving **99.9% production uptime**.
- Engineered the SDK event management framework using event-driven architecture, cutting cross-application data propagation latency by **40%** and inter-app communication failures by **60%** across 50+ hosted applications.
- Designed and standardized REST API integration patterns with Interop.io and internal teams — reducing partner onboarding time by **50%** across 5+ business units, serving as a direct force multiplier for developer productivity.
- Led zero-downtime migration of 15+ legacy WPF/Prism applications to a modern microservices-based hosting platform — reducing deployment cycle time by **35%** via structured rollout and observability-driven validation (Datadog, Dynatrace).
- Mentored 5+ engineers through design reviews and technical guidance; established platform-wide coding standards that accelerated feature delivery velocity by **25%**.

SEI Investments

Mar 2022 – Aug 2024

Sr. Java Developer — Special Assets Platform

Remote

- Architected a fully event-driven Kafka pipeline for end-to-end TBA Mortgage-Backed Securities trade lifecycle — processing **100,000+ trade events/day** over a platform supporting **\$2B+ in daily trade volume**.
- Designed exactly-once delivery semantics: message-key deduplication, transactional producers, and custom retry logic across Kafka and JMS — achieving **99.95% delivery reliability** at high throughput.
- Replaced synchronous settlement flows with async event streams, cutting latency by **45%** and enabling 8+ downstream services via Spring Boot REST APIs with sub-100ms response times under peak load.
- Onboarded a net-new TBA MBS asset class end-to-end — from design through production settlement — expanding platform capability and unlocking a new revenue stream previously unsupported in the system.

American Airlines

Aug 2018 – Mar 2022

Software Engineer — Inbound IVR Platform

Fort Worth, TX

- Decomposed a Java monolith into 12 independently deployable microservices on PCF/AWS — improving deployment frequency by **4x** and reducing production incidents by **30%**.
- Maintained core Java APIs supporting **5M+ customer interactions/month** at 99.9% availability across American Airlines' global customer base.
- Delivered SMS-based IVR self-service feature achieving **~13% containment rate** — deflecting 600,000+ calls annually and saving an estimated **\$3M+ in operational costs**.
- Built real-time personalization service using multithreading and IBM ODM rules — processing **1M+ personalized responses/month** at sub-200ms latency.

USAA

Jan 2017 – Aug 2018

Software Engineer

San Antonio, TX

- Built backend Java services for financial products serving military members and their families; contributed to API design and reliability in a regulated financial environment.

EDUCATION

University of Cumberlands

MS, Information Technology

December 2022

University of Louisiana at Monroe

BS, Computer Science | BS, Mathematics

April 2018

TECHNICAL SKILLS

Languages: Java, Python, TypeScript, JavaScript, C#, SQL, Groovy, Shell Script

Backend & Frameworks: Spring Boot, Spring Cloud, Spring Security, Spring Batch, Hibernate, JPA, gRPC, Node.js, Express.js

Messaging & Streaming: Kafka, Kafka Streams, JMS, RabbitMQ, ActiveMQ — exactly-once, transactional, high-throughput patterns

Distributed Systems: Microservices, Event-Driven Architecture, Service Mesh (Istio), DDD, CQRS, Saga Pattern, REST, GraphQL

Cloud & Infrastructure: AWS (EC2, S3, Lambda, SQS, SNS, RDS), GCP, Azure, PCF, Docker, Kubernetes, Helm, Terraform

CI/CD & Observability: Jenkins, GitHub Actions, Azure DevOps, ArgoCD, Datadog, Dynatrace, Splunk, Prometheus, Grafana, ELK Stack

Databases: PostgreSQL, Oracle, MySQL, MongoDB, Redis, Elasticsearch, DynamoDB

Frontend (Secondary): Angular, TypeScript, Electron, React, HTML5, CSS3
