PROFESSIONAL SUMMARY

Principal Software Engineer with 8+ years building fault-tolerant, high-throughput distributed systems in fintech and enterprise environments. Designed Kafka-driven pipelines at SEI Investments processing \$2B+ in daily trade volume with exactly-once delivery semantics -- the same correctness guarantees catalog and supply-chain systems demand. At Fidelity, engineered a platform SDK and API layer serving 40,000+ users across 20+ engineering teams with 99.9% uptime. At American Airlines, decomposed a monolithic IVR platform into independently deployable microservices handling 5M+ monthly customer interactions. Deep Java and Spring Boot expertise; proven at Kafka-scale throughput, distributed consistency, and zero-downtime production migrations. Relocating to California.

CORE COMPETENCIES

Java (Expert)

Spring Boot / Spring WebFlux

Kafka & Event Streaming

Distributed Systems

Microservices Architecture

Event-Driven Architecture

AWS / Kubernetes / Terraform

NoSQL Databases

High-Throughput Backend Systems

Zero-Downtime Migrations

Technical Mentorship

CI/CD (Jenkins, GitHub Actions)

EXPERIENCE

Fidelity Investments

Aug 2024 – Present

Principal Software Engineer — OpsWorX Platform | Westlake, TX

- Architected Java Spring Boot backend APIs and a platform SDK layer that unified integration standards across 20+ internal and partner engineering teams -- eliminating fragmentation and achieving 99.9% platform uptime in production.
- Engineered the SDK event management framework using event-driven patterns, reducing cross-application data propagation latency by **40%** and cutting inter-app communication failures by **60%** across 50+ hosted applications.
- Led zero-downtime migration of 15+ legacy WPF/Prism applications to a modern microservices-based hosting platform, reducing deployment cycle time by **35%**.
- Standardized REST API integration patterns with Interop.io and internal platform teams, cutting partner team onboarding time by **50%** across 5+ business units.
- Mentored 5+ engineers through design reviews; established platform-wide coding standards that accelerated feature delivery velocity by **25%**.

SEI Investments

Mar 2022 – Aug 2024

Sr. Java Developer — Special Assets Platform | Remote

- Architected a fully event-driven Kafka pipeline orchestrating end-to-end TBA Mortgage-Backed Securities trade lifecycle -- processing **100,000+ trade events daily** across a platform supporting **\$2B+ in daily trade volume**.
- Designed producer/consumer topology with message-key-based deduplication, transactional producers, and custom retry mechanisms -- guaranteeing **exactly-once delivery** with **99.95% reliability** across Kafka and JMS.
- Reduced settlement latency by **45%** through targeted distributed system optimizations, replacing synchronous flows with async event streams.
- Built Spring Boot REST APIs integrated with event streams for real-time trade status, supporting 8+ consuming services with **sub-100ms response times** under peak load.
- Onboarded a net-new TBA MBS asset class end-to-end -- trade creation through settlement -- expanding platform capabilities and unlocking a new revenue stream.

American Airlines

Aug 2018 – Mar 2022

Software Engineer — Inbound IVR Platform | Fort Worth, TX

- Maintained and modernized core Java APIs supporting IVR systems handling **5M+ customer interactions monthly** with 99.9% availability across American Airlines' global customer base.
- Led platform transition from Java monolith to microservices on PCF/AWS -- decomposing 12 tightly coupled services, improving deployment frequency by **4x** and reducing production incidents by **30%**.
- Delivered the IVR Containment Deeplink Project -- SMS-based self-service achieving **~13% containment rate**, deflecting **600,000+ calls annually** and saving an estimated **\$3M+ in operational costs**.
- Enhanced the Proactive Greeting Service using multithreading and IBM ODM rules, processing **1M+ personalized greetings monthly** with sub-200ms response times.

USAA

Jan 2017 – Aug 2018

Software Engineer

- Built backend Java services for financial products serving the military community; contributed to API design and service reliability in a regulated financial environment.

EDUCATION

MS, Information Technology — [University of Cumberland](#)

Dec 2022

BS, Computer Science | BS, Mathematics — [University of Louisiana at Monroe](#)

Apr 2018

TECHNICAL SKILLS

Languages: Java, Python, TypeScript, JavaScript, C#, SQL, Groovy, Shell Script

Backend & Frameworks: Spring Boot, Spring WebFlux (reactive), Spring Cloud, Spring Security, Spring Batch, Hibernate, JPA, gRPC, Node.js

Messaging & Streaming: Kafka, Kafka Streams, JMS, RabbitMQ, ActiveMQ -- exactly-once, transactional, high-throughput patterns

Distributed Systems: Microservices, Event-Driven Architecture,DDD, CQRS, Saga Pattern, REST, GraphQL, High-Concurrency, Low-Latency

Databases: Oracle, PostgreSQL, MySQL, MongoDB, DynamoDB, Redis, Memcache, Elasticsearch, Solr

Cloud & Infrastructure: AWS (EC2, S3, Lambda, SQS, SNS, RDS), GCP, Azure, Docker, Kubernetes, Helm, Terraform, Istio, PCF

CI/CD & Observability: Jenkins, GitHub Actions, Maven, Azure DevOps, ArgoCD, Datadog, Dynatrace, Splunk, ELK Stack, Prometheus, Grafana, SonarQube
